Rosengrens Security Cabinet

MultiSec our new tested safe for protection against fire and burglary

If you need secure, fireproof storage for your valuables and documents, MultiSec is the safe for you. Our new range consists of tested modular safes in various sizes, providing excellent protection against both burglary and fire. No one safe is like another, so the final touches are up to you.

Safes and tested safes

Our new safes are tested and certified to the common European standard EN 1143-1 in security grades 0/1 as well as by SP to the NT Fire 017 standard. This means that we guarantee that the valuables stored in the safes will withstand fire for 120 minutes, and provide two different grades of protection against burglary.

Seven sizes and flexible fittings

The MultiSec is available in seven sizes and has a large variety of interior fittings, from shelves to lockable compartments. All to make sure that you find the right safe with the right interior fittings to suit your specific requirements. You can even order new fittings once the safe has been delivered.

Innovations

Our new MultiSec safe boasts several unique new features. One is the door. You will notice that closing the door of a MultiSec safe is no different from closing the door to your car – instantly sealed with no play at all. Another innovation is a new perforation technology to improve fire safety even further.

Locks, locks and locks

We do not have a standard version of lock on MultiSec safes. We let your requirements determine which kind of lock you need. We can supply you with key locks, combination locks, electronic locks or a combination of locks. If you need to control and register all usage, use RCD – our electronic control system. The system also allows time-delayed opening to further improve security. All our models are prepared for dual locking, and come with high-quality tested locks.

Design

Once again we have used a well-known designer, this time Pelle Pettersson, to create the styling of our safes. We have also devoted a lot of effort to making the safes

ergonomic. A safe should work with the user and the surroundings, not against them. MultiSec safes work with you, as you will notice as soon as you start using them.

Modern production

All our new safes are manufactured at our state-of-the-art high-quality plant in Sweden. The plant is certified in accordance with ISO 9000, which guarantees the very best quality not only on the first safe manufactured, but also on the 15,000th. Furthermore, our products are subject to external manufacturing control by the relevant certification bodies.

As we mentioned earlier “No one safe is like another...”, which means that there is no standard version of the MultiSec. We build your safe according to your specifications, i.e. tailor-made production with a short delivery time.

The Environment

At the same time as investing in a new, modern plant, we also improved our environmental thinking. Our entire production, from the choice of material in the safes to the manufacturing process, is characterised by environ-

mental awareness. Most materials in the safes and the packaging are recyclable.

Multi Range

The MultiSec is part of our Multi Range, which also includes MultiData and MultiDoc. Our vision when we created the Multi Range was to make a safe that was flexible and easy to use as possible. It used to be tricky to store documents, computer media and valuables, because you needed two or three different safes. Our latest range of safes lets you store most of these things in one safe, saving time, money and space.

You can even adapt the safe as your requirements change. Call it a living safe, if you like.

Rosengrens is Europe's leading manufacturer of security solutions. It is our responsibility to inform you how to protect your most valuable assets against fire, break-ins and theft. It is our job to provide the tailor-made solutions.

We have been doing it for over 150 years, so we know our business. Let us help you to help yourself. Consult us when it comes to security, because Rosengrens is more than safe.
