

Deposit Safe AT-Dep

AT-Dep with integrated deposit unit

Large amounts of money at the cashiers desk results in a higher risk of hold-ups. Every year many companies incur high costs due to robbery and hold-ups. All security managers agree that the best way to protect staff and cash is to hold as little money at the cashier's desk as possible. The money should be stored in a tested safe. Rosengrens AT-Dep is the solution.

AT-Dep is based on the comprehensive Atlantic range of safes tested and certified to the European standard EN 1143-1. The deposit drawer is an integral part of the safe with the same security level.

High security – 24 hours deposits

The AT-Dep enables deposits of cash into the safe, while it remains locked. This enables staff without keys or codes to deposit cash at any time of the day. The system is very easy to use. A deposit is made by opening the drawer, placing the money into the compartment and when the drawer is closed the money falls into the safe. This ensures no access is available to anything already deposited into the safe.

Two Security levels

The AT-Dep is available in European grades I & II. The overall height is less than 650mm enabling the unit to be placed under most counters. The safe can be bolted to the floor or back wall.

Design and interior fittings

The attractive design and colour ensures it blends with a modern shop design.

Lock options

As standard the AT-Dep is equipped with the Rosengrens RKL-10 resettable key lock. The high security lock RKL-10 has more than 90 million key variations. The safe can also be equipped with mechanical combination locks or electronic

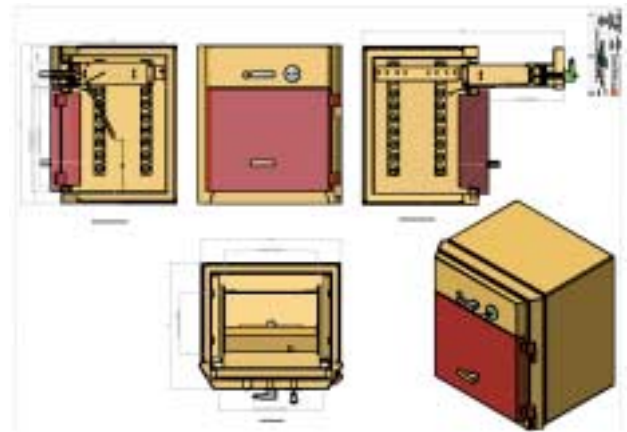

pin-code locks. The drawer is as standard equipped with a cylinder lock but for increased security RKL-10 or LG electronic locks are options.

The deposit drawer

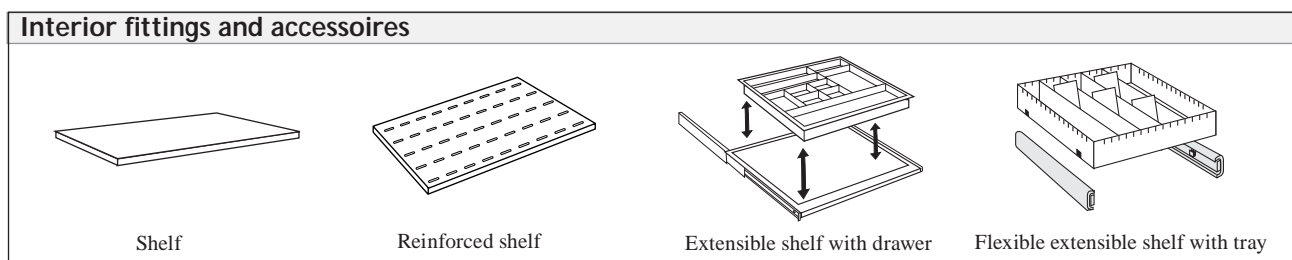

The deposit drawer is equipped with an anti-fishing device preventing any manipulation. Without compromising the high security of the drawer, there is enough space to accommodate a package of 88 x 364 x 236 mm (H x W x D).

Quality and environment

Gunnebo safe production units are today certified according to ISO 9001 and 14001 which guarantees top quality. Our production units are furthermore subject to an external manufacturing control.
